

SYSTEM 2000

SYSTEM 2000 Ground Engagement Tooling

SYSTEM 2000 is a high-tech road rehabilitation cutting system. It achieves top productivity levels, reduces downtime to virtually zero and significantly increases the durability of unsealed pavements. **SYSTEM 2000** comprises semi-permanent, one-piece heat treated, adaptor boards that house rotating tungsten carbide tipped ground engaging tools. The patented tip geometry and special high-density tungsten carbide grade are the key reason our tooling achieves extended wear life. As a package **SYSTEM 2000** offers a road rehabilitation product second to none.

FEATURES

- Cuts out ruts and removes washboards on gravel and dirt roads
- Breaks up rocks and roadway
- Reduces equipment costs
- Greatly reduces downtime
- Offers easy field maintenance
- Replacement tooling can last up to 15 sets of conventional blades
- Commonly used on mine site haul roads, both underground and surface operations
- Available for 5/8in (H series) graders in 12ft and 14ft, and 3/4in (M series) graders in 12ft, 14ft, 16ft and 24ft systems.
- NatDrill is the authorized Australian distributor for Sandvik.
