

## MIXING EQUIPMENT

### HYDRAULIC MUD MIXER

The Mud Mixer range has been designed to mix mud quickly, efficiently and safely on site.

This equipment will provide high speed agitation to bentonites and other drilling additives, ensuring maximum performance of fluids down the hole.

The mixer will enable operators to reduce mix times and wastage or settling out of additives in tanks whilst minimizing handling issues with its light weight but rugged design.

### FEATURES

- Various configurations available:
  - Mini: side mount unit, suited for small tanks
  - Maxi: side mount unit, suited for larger tanks
  - Pyramid: stand-alone unit, suited for positioning in the center of larger tanks complete with eyelets for anchoring. W&D: 1200mm x 450mm (HxW) @30kg.
- Light Weight
- Guarding of all rotating parts
- High speed rotation to shear the mud as it draws through the mixing cage
- Flow control valve to control rotation speeds
- Clearly labelled "pressure" and "return" hydraulic connections, pressure, return and case drain required to operate.
- Hydraulic requirements: 15 to 30 LPM @ 2000PSI
- Designed and manufactured in Western

Australia by:  **ASSENT ENGINEERING**
